

ALUMINIUM GREENHOUSE

Riga S / Riga

Subject to technical changes!

Current as of 09/2013

Basic kit assembly instructions

model Riga S
system width 2,32 m

model Riga
system width 2,96 m

Dear garden friend,

congratulations on the purchase of an aluminium greenhouse made by

The construction is simple. First read the assembly instructions and follow them step by step.

Parts and parts list

Please complete all boxes stored dry and protected from direct sunlight!

number of cartons

	basic construction (gable/eaves)	curved center profiles	windows/ doors	glazing
Riga S/II/III/IV	1	1	1	1
Riga III/IV/V	1	1	1	1

Start with the basic kit. Please do not open all the boxes at the same time. Let's not get confused by the variety of items.

Before you begin assembly, check on the parts lists, if all parts are present. Each box goes through a quality check before it is closed, thus missing parts are almost excluded. Should any parts are missing, please give us the wrong position.

Customer Service: 877-760-8500 or 512-407-8500 sales@Exaco.com
Exaco Trading
10203 Metropolitan Dr.
Austin, TX 78758

Location

Choose, if possible, a sunny place for your greenhouse. Avoid the shadow of buildings and trees. For vegetables, like tomatoes, cucumbers and melons, make your greenhouse as possible in north-south-direction. For flowers and potted plants in east-west-direction.

Warning:

The greenhouse should preferably be placed in a sheltered spot and not in stormy weather. It is dangerous to leave a partly assembled house!

With the correct assembly resists this greenhouse and strong winds. The manufacturer assumes no responsibility for any damage by improper installation or acts of God.

The constructions of the greenhouse must be conducted by at least two people. Work with secure, craft-oriented tools. Be careful when assembling on a secure stand of the ladder (risk of accident!).

In principle, only with gloves on (risk of injury, average risk!).

For the configuration you need the following tools:

- 1 pc. Phillips screwdriver size 2
- 1 pc. foot-end wrench 10 mm
- 1 pc. screwdriver
- 1 pc. allen key 3 mm (in the accessoires bag of the roof window)
- 1 pc. level
- 1 pc. stepladder
- 1 pc. file to remove any burrs on the profiles
- 1 pc. rubber hammer
- 1 pc. tape measure

You should be careful:

Wedge seals (V23) pull apart the center!

Hexagonal screws can also be inserted later in the plastic slider!

Plastic slider in the bottom door frame, side and roof bars

Push the seal 3 - 5 mm between the soil profile and the glazing.
Both within the greenhouse!

Important: This compress the seals because they contract in cold weather!

!!!Note: Important information for glazing!!!

The ISO-Cellular sheets, speak glazing, always install the UV coated side out. The plates have on the protective film has a hint.

The protective film, first loosen the edges and only after the complete assembly pull it off immediately. After several days of sunlight can burn the film firmly on the plates and can be solved only with difficulty.

Do not pull the box right after the film, otherwise you could not tell which side has the UV protection!

Question: Do I have a greenhouse and the greenhouse glazing and "seal"?

In principle: **No**.

But we recommend the horizontal transitions of the glazing to the profile (see sketch --> dashed line ----) sealed with neutral cure, silicone transparent, so that as little water and can therefore get a little dirt in the glass shots.

Advantage: The greenhouse looks to length of optically better. The tendency to formation of algae just takes considerably in these areas.

Moisture/water can also occur within the glass/hollow chambers depending on the weather, since the plastic plates are not "water-vapor-permeable solid", ie moisture occurs in the form of water vapor into the plate. This is possible a purely optical disadvantage, however, can not be avoided. The plates can thus take no damage, even at freezing temperatures.

Warning: Use only neutral cure silicone, otherwise it may lead to stress cracks in plastic de-glazing. This is the most common silicone sealant. It is in any hardware store or at HOKLAR-Therm for about 4 - 6 € available/cartridge.

Cleaning and care:

The greenhouse with plenty of water such as car washing brush. In addition, using a little detergent.

Foundation frame for digging (optional)

!!!Warning: Use only according to instructions under foundation. See below!!!

This is the easiest, safest and also foundation of a greenhouse.

The foundation frame is hooked force-fit into the soil profile of the greenhouse screwed into the corners with a corner angle (V26). (See page 6).

The foundation frame is assemble to coincide with the greenhouse together.

Setting up the foundation frame

A small ditch, sod (about 10 - 12 cm deep), dug into the dimensions of the foundation frame. Use in the corners as a paving stone according to the other horizontally.

These are then the safe circulation and avoid "bagging" a possibly of the greenhouse. The greenhouse and the foundation frame in this "gab" and set them with earth fill.

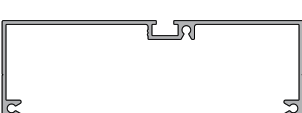

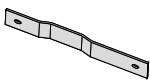

Expedient is also the creation of garden slaps or stone pavement, so the greenhouse at eg heavy rain is not covered by mud splashes is.

In addition, the work made easier around the greenhouse, such as mowing the lawn.

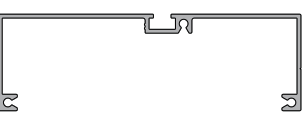

Profiles and accessoires for foundation frame *Riga S*:

- See next page!

Assembly foundation frame

The foundation frame profiles separately in the soil profiles rotate and center align.

Note: The foundation frame profiles are shorter than soil profiles!

Note: The foundation frame profiles are shorter than soil profiles!

To stabilize the house, the mounting bracket (V27) using bolts M6 x 12 (S12) retracted bolted to the foundation frame and the side rungs or door frames.

In the foundation frame profiles in the corner of one bolt M6 x 12 (S12) to move, corner brackets (V26) and fasten with nut M6 (S1).

Foundation of the greenhouse

We recommend that you use for the bolt in place anchor bolts. These are **not** included!

Foundation plan Riga S/Riga all dimensions in [cm]

Foundation of your greenhouse with a strip foundation

If you have not bought a foundation frame, the secure foundation by means fo strip foundation. Then please create such a foundation in accordance with the specified dimensions below.

You have set up your possibility to the greenhouse on low cur stones such as, 50 x 25 x 8 cm or better 50 x 30 x 10 cm.

Please note that the foundation is made evenly horizontally.

The greenhouse then please anchoring with the included mounting brackets (V15) with the dowels (minimum)

Screws and ancors are **not** included.

Assembly procedure gable

view from inside

ATTENTION! When using a foundation frame assemble in advance on this soil profile (see page S. 5, 6)

<p>step 1</p> 	<p>to step 1:</p> <p>First, please slide the door frame left (pos.1.6) and the door frame (pos.1.7) (profile with 8 drill holes, a 30° chamfer and a black plastic glide) up to the small holes in the middle of the soil profile. The chamfer must show this to the outside. Then attach the corner bracket (V9) on the soil profile.</p>				
<p>step 2</p>  <table border="1"> <thead> <tr> <th>Riga S</th> <th>Riga</th> </tr> </thead> <tbody> <tr> <td>730 x 728</td> <td>1048 x 728</td> </tr> </tbody> </table> <p>Note: Only after the screw mounting of the door --> ability to align.</p>	Riga S	Riga	730 x 728	1048 x 728	<p>to step 2:</p> <p>Even now you need the small side windows. Dimensions are listed in the table. With bar direction - vertical - in the soil profile and sideways while in the door frame.</p>
Riga S	Riga				
730 x 728	1048 x 728				
<p>step 3</p> 	<p>to step 3:</p> <p>Now the cross bar (pos. 1.9) is inserted from the top of the glazing.</p>				
<p>step 4</p> <p>view from inside</p> 	<p>to step 4:</p> <p>Before the connecting plate (V5) with the door frame above (pos.1.8) screwed, slide in the vertical door frames (pos.1.6/1.7) two hex screws M6 x 16 (S5) and in the horizontal door frame in M6 x 16 (S5) one.</p>				

Assembly procedure gable

view from inside

ATTENTION! When using a foundation frame assemble in advance on this soil profile (see page 5, 6)

<p>step 5</p>	<p>to step 5:</p> <p>The square peg of the corner connector is plugged in the rand rung (pos.1.5.4/1.5.6). Small triangular glazing positioned on the door frame (pos.1.8).</p> <p>The rand rung by means of connecting plate (V5) screwed to the door frame. On the rand rung you need 2 self-tapping screws pan head 4,2 x 13 (S9), on the door frame 2 hexagonal screws M6 x 16 (S5).</p> <p>- See also step 4! -</p>
----------------------	---

<p>step 6:</p> <p>view from outside</p>	<p>to step 6:</p> <p>The cross bars (pos.1.9) are mounted sideways with the self-tapping screw pan head 4,8 x 45 (S13).</p>
--	--

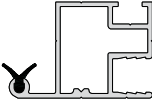

The rear gable is assembled in the same way!!!

<p>step 7:</p> <p>Only rear gable!</p>	<p>to step 7:</p> <p>Slide before mounting the cross bar required hex screws M6 x 16 (S5) into the profile of the cross bar (pos.1.8 und 1.9).</p> <p>The cross bar in the rear gable is used the same height as the existing cross bar. Attachment is to the connecting plate (V10).</p> <p>Now comes the glazing (787 x 728 mm). The remaining opening is later closed by the supplied rear window.</p>
--	--

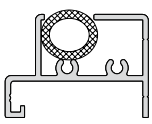

You should be careful:

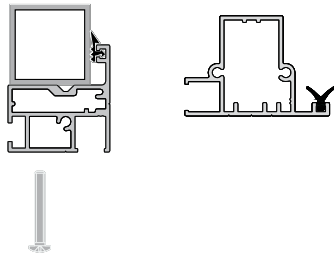

T-seals (V25) for all doors and windows
(total: 15 meters)

Attention! When the roof window for pushing into the ridge the T-seal at this side omit!!!

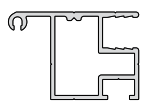

In the door area the hose section(V14) is pressed into the soil profile. (As a stop/seal to protect from dirt into the soil profile).

Attention! In the bottom door is first pressed the seal, and only then will the rectangular tube screwed!

Mounting roof window

wrong!!!

right

Please push the roof window from the gable side into the ridge and slide in position.
Automatic window opener mount.

Insertion of the seal in the roof window area

The seal is inserted as the sketch above. [.....]

Attention: Seal does **not** cut into the corners! Important!

The transitions of the glazing and the corner bracket/roof window to roof window profile, please seal it with silicone → see sketch.

Parts window opener

1	window opener
2	pressure cylinder
3	cotter pin
4	mounting plate window profile
5	mounting plate cross bar

User guide - window opener -

Assembly instructions:

1. Check whether the greenhouse window can open and close freely and unhindered.
Please remove from other manufacturers in advance the existing hand openers.
2. First install the window opener with the mounting plate (4) to the roof window profile (pos. 4.2).
3. Choose from the mounting plate (5) the middle hole and attach it to the cross rung (pos.3.2) below the roof window.
4. The pressure cylinder at the upper end of threaded device secure with the cotter pin in the t-coupling (upper hole).

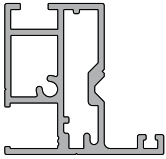

Adjustment:

The window opener needed after the assembly about 3 - 4 hours to adjust the temperature in the greenhouse. The more you screw the pressure cylinder into the threaded device, the earlier and more highly opens the window. Do you want earlier/higher opening, turn the pressure cylinder clockwise. In a later/lower opening counter-clockwise, with one turn is about 0,5°C. Please keep in mind that can vary the temperature in your greenhouse and several window openers have small tolerances.

Winter-storage:

If the greenhouse is not "frost-free" hold, we recommend you to remove the entire window opener or only the pressure cylinder. Please keep the window opener in a dry or frost-free place. Before reassembly in the spring especially the cylinder rod and the cylinder threads are greased to check if it is. The cylinder rod check for ease of movement, please.

Assembly procedure - eaves -

ATTENTION! When using a foundation frame assemble in advance on this soil profile (see page 5, 6)

step 8

to step 8:

First, the lateral soil profiles on the corner bracket on the gable attach.

step 9

ridge profile (pos. 3.3) at the gable and end plate (V11) screw with self-tapping screw pan head 4,2 x 13 (S9)

to step 9:

Now you need several hands or corresponding aids.

Gable upright, hold and secure support.

The ridge profile (pos. 3.3) now introduce into the existing grooves/ slots of the gable, so that the profiles is flush with the front. Now screw the end plate (V11) with self-tapping screw pan head 4,2 x 13 (S9).

step 10

to step 10:

Slide the side glazing in the soil profile and rand rung and threading.

tip:
please solve the foil only at the margin!

Assembly procedure - eaves -

ATTENTION! When using a foundation frame assemble in advance on this soil profile (see page 5, 6)

step 11

to step 11:

The side rung (pos. 2.3) above into the ridge profile and below into the soil profile to glazing insert it. There, the plate is threading.

If necessary, timber and plastic hammer to get help.

Tip:

Greasing plastic gliders perhaps a little!

step 12

to step 12:

Insert further side glazing and rungs.

The connecting plate (V4) from inside screwed with screw hex M6 x 16 and nut M6.

step 13

to step 13:

Insert the remaining plates and rungs now.

Assembly procedure - eaves -

ATTENTION! When using a foundation frame assemble advance on this soil profile (see page 5, 6)

step 14

to step 14:

The door gable is pre-mounted and screwed.

For added stability must now mounting inside corner (V1) be attached. Use the self-tapping screw pan head 4,2 x 13 (S9).

step 15

to step 15:

Install door and window.
Instructions, see page 12-21.

step 16

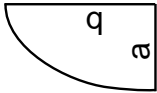

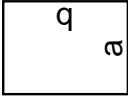

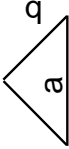

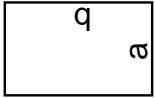

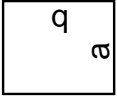

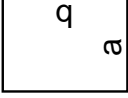

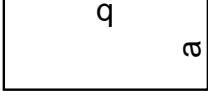

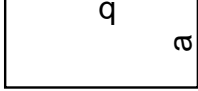

Represented
for the better
representation
plates cut.

to step 16:

The stabilization angle (pos 3.4) become on both sides from inside to the side rung with screw M6 x 16, nut M6 and washer A6,4 screwed. The angles are also profiles for rearward tables and shelves (see separate instructions).

glas plan with ISO-cellular sheets 10 mm
